Update: we think Huerfano does include a 3-mile reach of the Animas. We are adding Huerfano back to the affected chapter list.

Linda;

Thanks for sharing the information about Dennehotso, Huerfano, Inscription House. We looked at those with NN folks here. They felt that Huerfano is above the Animas confluence, so wouldn't be impacted.

For Dennehotso and Inscription House, they deferred to NTUA – can you get an opinion from Rex or someone about whether they are affected and need outreach (or perhaps if they are not affected but still need outreach to assuage concerns) based on their drinking water source and distance to the river? They are interested in NTUA's opinion.

If you have other info about Huerfano, please share!

LE
